Summary

I am a PHP Backend Developer with more than 7 years of experience using Laravel and Symfony framework, I like working with Docker, Docker-compose and I use Jenkins for CI/CD; In addition, I use Git as version control in order to improve the project that is assigned to me and GitHub Actions to perform CI/CD as well.

Lover of continuous learning, I am very disciplined, capable of working in a team and in the future, I would like to be a Technical Leader as well as continue working remotely.

My native language is Spanish, but I really like the English language, my current level is B1, but with the idea of continuing to improve it more and more.

Experience

Desarrollador PHP Backend

Cognox

Aug 2021 - Present (9 months +)

- Development of PHP Backend using Laravel 8 Framework, GraphQL and Docker for the company's private project using Scrum and Jenkins methodology for CI.

Tech stack: PHP | Laravel | Jenkins | GraphQL | Docker | Scrum
